No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 5844075
GENERAL INFORMATION:
APPLICANT: KAWAKAMI, YUTAKA, ROSENBERG,
APPLICANT: STEVEN A.
TITLE OF INVENTION: MELANOMA ANTIGENS AND
TITLE OF INVENTION: THEIR USE IN DIAGNOSTIC AND THERAPEUTIC TITLE OF INVENTION: METHODS
NUMBER OF SEQUENCES: 126
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           100.0%; Score 55; DB 1; Length 10; 100.0%; Pred. No. 0.00099;

i Sequence 126, Application US/09073138

j Patent No. 6537560

i GENERAL INFORMATION:

APPLICANT: KAWAKAMI, YUTAKA; ROSENBERG,

ITILE OF INVENTION: MELANOMA ANTICENS AND

TITLE OF INVENTION: HEIR USE IN DIAGNOSTIC AND THERAPEUTIC;

TITLE OF INVENTION: METHODS

TITLE OF INVENTI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           APPLICANT: AGRAWAL, Babita
KRANTZ, Mark J.
REDDISH, Mark A.
LONGENECKER, B. Michael
TITLE OF INVENTION: METHOD FOR GENERATING ACTIVATED T-CELLS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

hypothetical protein all1527 - Synechocystis sp. (strain PCC 6803)
C;Species: Synechocystis sp.
A;Variety: PCC 6803
C;Date: 25-Apr-1997 #sequence_revision 25-Apr-1997 #text_change 09-Jul-2004
C;Accession: 876195
R;Kaneko, T.; Sato, S.; Kotani, H.; Tanaka, A.; Asamizu, E.; Nakamura, Y.; Miyajima, N.;

```
O, K.; Okumura, S.; Shimpo, S.; Takeuchi, C.; Wada, T.; Watanabe, A.; Yamada, M.; Yasud. DNA Res. 3, 109-136, 1996
A;Title: Sequence analysis of the genome of the unicellular cyanobacterium Synechocysti. S.; Reference unalysis of the genome of the unicellular cyanobacterium Synechocysti. S.; Reference unaber: S74132; MUID:97061201; PMID:8905231
A;Accession: S76195
A;Status: preliminary
A;Molecule type: DNA
A;Molecule type: DNA
A;Residues: 1-1168 cKAN>
A;Residues: 1-1168 cKAN>
A;Residues: UNIPROT:P74359; EMBL:D90914; GB:AB001339; NID:g1653477; PIDN:BAA184
A;Note: the nucleotide sequence was submitted to the EMBL Data Library, June 1996
C;Superfamily: Synechocystis hypothetical protein s111527

US-09-248-796A-24410

Sequence 24410, Application US/09248796A

Patent No. 6747137

GENERAL INFORMATION:

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBIC?

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US 60/074,725

PRIOR PILING DATE: 1999-02-13

PRIOR PILING DATE: 1999-02-13

PRIOR PILING DATE: 1999-08-13

NUMBER OF SEQ ID NOS: 28208

SEQ ID NO 24410

LENGTH: 174
                                                                                                                                                                          GENERAL 13-999C-5453
; Sequence 5453, Application US/09513999C
; Patent No. 6783961
; GENERAL INFORMATION:
; APPLICANT: Dunas Milne Edwards, J.B.
; APPLICANT: Dunals Milne Edwards, J.B.
; APPLICANT: Dunals Milne Edwards, J.B.
; APPLICANT: Dunals Milne Edwards, J.Y.
; TITLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.
; PILE REFERENCE: 59.012.REG
; CURRENT APPLICATION NUMBER: US/09/513,999C

A;Contents: annotation; animal lectin domain homology

C;Comment: Pulmonary surfactant is a complex of phospholipids and proteins that lowers the C;Comment: This protein is a slaloglycoprotein synthesized by alveolar type II cells. It pendent on the presence of calcium ions.

C;Superfamily: mannose-binding lectin, C-type lectin homology

C;Reywords alveolar proteinosis; calcium; disulfide bond; gaseous exchange; hydroxyprol F:1-17/Domain: signal sequence #status predicted <SIGs

F:18-248/Product: pulmonary surfactant protein A #status experimental <MPT>

F:28-102/Region: collagen-like
                                                                                                                                                                             A Molecule type: mRNA

**Residues: 1-248 <BRN>

**A/Note: the authors translated the codon TTG for residue 60 as Pro

**A/Note: part of the sequence, including the amino end of the mature protein, was confirm

submitted to the EMBL Data Library, February 1997

A; Description: The sequence of C. elegans cosmid K11H12.

A; Reference number: 221526

A; Accession: T34436

A; Status: preliminary; translated from GB/EMBL/DDBJ

A; Molecule type: DNA

A; Residuses: 1-108 - BRA>

A; Cross-references: UNIPROT:P91375; EMBL:U88168; PIDN:AAC24398.1; GSPDB:GN00022; CESP:K1

A; Residuses: 1-108 - RRA>

A; Cross-references: WIPROT:P91375; EMBL:U88168; PIDN:AAC24398.1; GSPDB:GN00022; CESP:K1

A; Reperimental source: strain Bristol N2; clone K11H12

C; Genetics:
A; Map position: 4

A; Introns: 22/3; 61/3

C; Superfamily: bolA protein

Query Match

G; Superfamily: bolA protein

G; Superfamily: bolA protein

Best Local Similarity 66.7%; Pred: No. 11;
